

ABSTRACT

A sign for posting on the interior or exterior of a transparent or opaque surface without the use of any secondary adhesive material, such as any variety of tape, Velcro, suction cup or any other secondary adhesive device, apparatus
5 or method. The sign can be printed on either or both sides using a desktop printer or other printing device. If printed on both sides and affixed to a transparent surface such as glass, a single sign then yields two signs. The sign can be cut into a variety of shapes using virtually any type of paper stock or adhesive.
